

**ORDINANCE NO. 2013-11-109**

**AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF McKINNEY, TEXAS AMENDING CHAPTER 130, ENTITLED “LAND DEVELOPMENT REGULATIONS,” OF THE CODE OF ORDINANCES OF THE CITY OF MCKINNEY, TEXAS, THROUGH THE AMENDMENT OF EXISTING ARTICLE II ENTITLED “WATER AND WASTEWATER IMPACT FEES” BY AMENDING PORTIONS OF SECTIONS 130-22, 130-26 THROUGH 130-29, AND SECTIONS 130-33, 130-68, AND 130-71 AS SET FORTH HEREIN BELOW; BY THE ADOPTION OF A NEW EXHIBIT 1 REGARDING THE 2012-2013 LAND USE ASSUMPTIONS FOR UTILITY IMPACT FEES; BY THE ADOPTION OF A NEW EXHIBIT 2 REGARDING THE 2012-2013 WATER & WASTEWATER IMPACT FEE UPDATE (“WATER & WASTEWATER IMPROVEMENTS PLANS”); AND BY THE ADOPTION OF A NEW SCHEDULE 1 REGARDING THE ASSESSMENT AND COLLECTION OF WATER AND WASTEWATER IMPACT FEES; PROVIDING THIS ORDINANCE BE CUMULATIVE; PROVIDING FOR SEVERABILITY; PROVIDING FOR GOVERNMENTAL IMMUNITY; PROVIDING FOR INJUNCTIONS; AND PROVIDING FOR AN EFFECTIVE DATE**

**WHEREAS**, the City of McKinney (the “City”) is a home-rule city possessing the full power of local self-government pursuant to Article II, Section 5 of the Texas Constitution, Section 51.072 of the Texas Local Government Code and its home rule charter; and

**WHEREAS**, the City established utility impact fees to be imposed within its corporate limits and within its extraterritorial jurisdiction by Ordinance No. 1868, and as amended by Ordinance No. 1996-03-013; Ordinance No. 2001-08-092; Ordinance No. 2003-05-056; and Ordinance No. 2008-11-103 in compliance with Chapter 395 of the Texas Local Government Code (the “Utility Impact Fee Ordinances”); and

**WHEREAS**, the Utility Impact Fee Ordinances have been codified in Article II of Chapter 130 of the Code of Ordinances, City of McKinney, Texas; and

**WHEREAS**, Texas Local Government Code Section 395.052 requires a city imposing utility impact fees to update the land use assumptions and capital improvements plans at least once every five years; and

**WHEREAS**, the City held a public hearing and approved the Updated Land Use Assumptions For Utility Impact Fees in conjunction with Resolution No. 2013-06-089 (R), which Resolution and Assumptions are attached hereto as Exhibit 1 and incorporated herein by reference for all purposes allowed by law; and

**WHEREAS**, the City held a public hearing and approved the 2012-2013 Water & Wastewater Impact Fee Update (“Water & Wastewater Improvements Plans”) in conjunction with Resolution No. 2013-11-187 (R), which Resolution and Update are attached hereto as Exhibit 2 and incorporated herein by reference for all purposes allowed by law; and

**WHEREAS**, the City Council finds that the provisions governing the administration of utility impact fees and Schedules 1 and 2 setting forth the water and wastewater impact fees to be assessed and collected established in the Utility Impact Fee Ordinances and codified in Article II of Chapter 130 of the Code of Ordinances, City of McKinney, Texas, should be amended; and

**WHEREAS**, the City Council finds that the City has complied with Chapter 395 of the Texas Local Government Code in the amendment of the land use assumptions, capital improvements plans, and utility impact fees; and

**WHEREAS**, the proposed amendments to Article II of Chapter 130 of the Code of Ordinances, City of McKinney, Texas, are in the best interest of the citizens of McKinney to assure the availability of adequate water and wastewater facilities and services in order to serve new development consistent with the policies set forth in the City's Comprehensive Plan.

**NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MCKINNEY, TEXAS, THAT:**

1.

All of the above premises are hereby found to be true and correct legislative and factual findings of the City of McKinney, and they are hereby approved and incorporated into the body of this Ordinance as if restated herein in their entirety.

2.

From and after the effective date of this Ordinance, Section 130-22 entitled "Definitions" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by deleting the definition of "Land Use Assumptions" and replacing said definition with a new definition for the phrase "Land Use Assumptions" to read as follows:

"Land Use Assumptions means and includes a description of the Service Areas and the projections of population and employment growth and associated changes in land uses, densities and intensities adopted by the City, as may be amended from time to time, in the Service Area over a 10-year period upon which the Impact Fee Capital Improvements Plans are based. The Land Use Assumptions are set out in the most recently updated Land Use Assumptions for Utility Impact Fees adopted by resolution of the City Council of the City of McKinney, Texas, and attached hereto as Exhibit 1."

3.

From and after the effective date of this Ordinance, Section 130-22 entitled "Definitions" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by deleting the definition of "Wastewater Improvements Plan" and replacing said definition with a new definition for the phrase "Wastewater Improvements Plan" to read as follows:

"Wastewater Improvements Plan identifies the wastewater facilities or wastewater expansion and their associated costs that are necessitated by and which are attributable to new development, for a period not to exceed ten (10) years, which capital improvements are to be financed in whole or in part through the imposition of wastewater impact fees pursuant to this Article. The Wastewater Improvements Plan is a part or component of the "Impact Fee Capital Improvements Plan or Capital Improvements Plans for Utility Impact Fees" ("Utility Improvements Plan") adopted by resolution of the City Council of the City of McKinney, Texas, and attached hereto as Exhibit 2."

4.

From and after the effective date of this Ordinance, Section 130-22 entitled "Definitions" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by deleting the definition of "Water Improvements Plan" and replacing said definition with a new definition for the phrase "Water Improvements Plan" to read as follows:

"Water Improvements Plan identifies the water facilities or water expansions and their associated costs that are necessitated by and which are attributable to new development, for a period not to exceed ten (10) years, which capital improvements are to be financed in whole or in part through the imposition of water Impact Fees pursuant to this Article. The Water Improvements Plan is a part or component of the "Impact Fee Capital Improvements Plan or Capital Improvements Plans for Utility Impact Fees" ("Utility Improvements Plan") adopted by resolution of the City Council of the City of McKinney, Texas, and attached hereto as Exhibit 2."

5.

From and after the effective date of this Ordinance, Section 130-26 entitled "Impact Fees per Service Unit" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended and replaced in its entirety so that hereafter said Section 130-26 shall be and read as follows:

"Sec. 130-26.            Impact Fees Per Service Unit

- (a) The maximum impact fee per service unit (pre-credit) and the maximum assessable impact fee per service unit (post-credit) for wastewater and water facilities shall be as set forth for each Meter Size and Meter Type where Meter Type is distinguished in:
- (1) Schedule 1, Table A, if the date of final plat recording is prior to September 1, 2003 and replatting is not necessary;
  - (2) Schedule 1, Table B, if the date of final plat recording is on or after September 1, 2003 through and including November 9, 2008 and replatting is not necessary;
  - (3) Schedule 1, Table C, if the date of final plat recording is on or after November 10, 2008 through and including November 19, 2013 and replatting is not necessary;
  - (4) Schedule 1, Table D, if the date of final plat recording or replat recording is on or after November 20, 2013.

Schedule 1, Tables A through D (sometimes hereinafter referred to collectively as "Schedule 1") are attached hereto and made a part of this Article by reference. Schedule 1 may be amended from time to time by Ordinance.

- (b) The maximum impact fee per service unit (post-credit) set forth in Schedule 1 that is assessed to new

development, as may be amended from time to time, is declared to be the roughly proportionate measure of the impact(s) generated by a new unit of development on the City's utility system. To the extent that the impact fee per service unit collected is less than the maximum assessable impact fee per service unit, such difference is hereby declared to be founded on policies unrelated to the measurement of the actual impacts of the development on the City's transportation system. The maximum assessable impact fee per service unit may be used in evaluating any claim by an applicant, developer, or property owner that the dedication, construction, or contribution of a capital improvement imposed as a condition of development approval pursuant to the City's regulations is not roughly proportionate to the impact(s) of the new development on the City's utility system."

6.

From and after the effective date of this Ordinance, Section 130-27 entitled "Assessment of Impact Fees" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended and replaced in its entirety so that hereafter said Section 130-27 shall be and read as follows:

**"SECTION 130-27. Assessment of Impact Fees**

- (a) Assessment of the impact fee per service unit for any new development shall be made as follows:
  - (1) For a new development for which a final plat was recorded prior to September 1, 2003 and for which no replatting is necessary pursuant to the City's subdivision regulations prior to development or for a new development for which no plat is necessary pursuant to the City's Zoning Ordinance because the property in question is a lot of record, assessment of impact fees shall occur at the time application is made for the building permit, and shall be the amount of the maximum assessable impact fee per service unit (post-credit) as set forth in Schedule 1, Table A, attached hereto and incorporated herein by reference, for each meter size for each proposed development unit as set forth in Schedule 1, Table A.
  - (2) For a new development for which recordation of the final plat occurred on or after September 1, 2003 through and including November 9, 2008 and for which no replatting is necessary pursuant to the City's subdivision regulations, assessment of impact fees shall occur at the time of final plat recordation and shall be the amount of the maximum assessable (post-credit) impact fee per service unit (post-credit) as set forth in Schedule 1, Table B, attached hereto and incorporated herein by reference, for each meter size for each proposed development unit as set forth in Schedule 1, Table B .

- (3) For a new development for which recordation of the final plat occurred on or after November 10, 2008 through and including November 19, 2013, and for which no replatting is necessary, assessment of impact fees shall occur at the time of final plat recordation and shall not exceed the amount of the maximum assessable impact fee per service unit (post-credit) as set forth in Schedule 1, Table C, attached hereto and incorporated herein by reference, for each Meter Size and Meter Type for each proposed development unit as set forth in Schedule 1, Table C.
  - (4) For a new development for which recordation of the final plat occurred on or after November 20, 2013, assessment of impact fees shall occur at the time of final plat recordation and shall not exceed the amount of the maximum assessable impact fee per service unit (post-credit) as set forth in Schedule 1, Table D, attached hereto and incorporated herein by reference, for each meter size and meter type for each proposed development unit as set forth in Schedule 1, Table D.
  - (5) For land on which new development occurs or is proposed to occur without platting, assessment of impact fees shall occur at the time application is made for the building permit, and shall be the amount of the maximum assessable impact fee per service unit (post-credit) as set forth in Schedule 1, Table D, attached hereto and incorporated herein by reference, for each meter size and meter type for each proposed development unit as set forth in Schedule 1, Table D.
- (b) Following Assessment of the Impact Fee pursuant to subsection (A), the amount of the Impact Fee Assessed per Service Unit for that development cannot be increased, unless the owner proposes to change the approved development by the submission of a new application for Final Plat Approval or replat approval or proposes to increase the Meter Size or Meter Type for any use within that development, in which case new Assessment shall occur at the maximum assessable Schedule 1 rate then in effect.
  - (c) In the event that a development is evaluated by City staff, which results in a decrease in the number of Service Units, the City will credit the overall development, based on the reduction in the number of Service Units.
  - (d) Following the vacating of any plat or submittal of any replat, a new Assessment must be made in accordance with Section 130-26.
  - (e) Approval of an amended plat pursuant to Texas Local Government Code, Section 212.016, and the

Subdivision Ordinance, Section 142-79, is not subject to reassessment for an Impact Fee provided that the use of the property remains the same and no increase in the Meter Size or Meter Type for any use within that development is sought."

8.

From and after the effective date of this Ordinance, Section 130-28 entitled "Payment and Collection of Impact Fees" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by deleting paragraph (d) in its entirety and replacing said paragraph with a new paragraph (d) to read as follows:

- "(d) The amount of each Impact Fee (wastewater and water) for a New Development shall not exceed an amount computed by multiplying the maximum assessable fee per Service Unit for each category of utility pursuant to Section 130-26 by the number of Service Units generated by the development. According to the American Water Works Association the ratio of water flows for different sizes and types of Water Meters is as follows:

| Meter Size       | Meter Type           | Ratio to $\frac{3}{4}$ " meter |
|------------------|----------------------|--------------------------------|
| $\frac{3}{4}$ "  | Simple               | 1.0                            |
| 1"               | Simple               | 1.7                            |
| $1\frac{1}{2}$ " | Simple               | 3.3                            |
| 2"               | Simple               | 5.3                            |
| 2"               | Compound             | 5.3                            |
| 2"               | Turbine (Irrigation) | 10.7                           |
| 3"               | Compound             | 10.7                           |
| 3"               | Turbine (Irrigation) | 23.2                           |
| 4"               | Compound             | 16.7                           |
| 4"               | Turbine (Irrigation) | 43.3                           |
| 6"               | Compound             | 33.3                           |
| 6"               | Turbine (Irrigation) | 93.3                           |
| 8"               | Compound             | 53.3                           |
| 8"               | Turbine (Irrigation) | 160.0                          |
| 10"              | Turbine (Irrigation) | 233.3                          |
| 12"              | Turbine (Irrigation) | 293.3                          |

Accordingly, the number of service units for each Meter Size and Meter Type follows the same ratio and is used to determine the proportional water and wastewater impact fee for each Meter Size and Meter Type compared to a simple  $\frac{3}{4}$ " Water Meter."

9.

From and after the effective date of this Ordinance, Section 130-29 entitled "Offsets and Credits against Impact Fees" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by adding a new subparagraph (8) to paragraph (b) of said section to read as follows:

- "8. a provision stating that in those instances where the City determines the projected cost to construct a system facility is not roughly proportionate to the dollar value of the impact fee credits which may be awarded for that system facility the City may consider, upon request of the Developer, awarding

impact fee credits based on the lesser of a percentage of the City's projected costs for that system facility or a percentage of the documented and City-approved costs to the Developer of the system facility which was dedicated to and accepted by the City with the City's projected costs or the documented and City-approved costs to the Developer being reduced by the same percentage of reduction as applied to the maximum impact fee per service unit (pre-credit) to arrive at the maximum assessable impact fee per service unit (post-credit) as reflected in the applicable Table of Schedule 1."

10.

From and after the effective date of this Ordinance, Section 130-33 entitled "Refunds" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended by deleting paragraph (e) in its entirety and re-lettering paragraph (f) as paragraph (e).

11.

From and after the effective date of this Ordinance, Section 130-68 entitled "Water Improvement Plan" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by deleting the second sentence of paragraph (a) so that hereafter paragraph (a) of said Section 130-68 shall be and read as follows:

- "(a) The Water Improvements Plan for the City of McKinney is a component of the Water & Wastewater Improvements Plans attached hereto and incorporated herein by reference as Exhibit 2."

12.

From and after the effective date of this Ordinance, Section 130-71 entitled "Wastewater Improvements Plan" of the Code of Ordinances of the City of McKinney, Texas, is hereby amended in part by deleting the second sentence of paragraph (a) so that hereafter paragraph (a) of said Section 130-71 shall be and read as follows:

- "(a) The Wastewater Improvements Plan for the City of McKinney is a component of the Water & Wastewater Improvements Plans attached hereto and incorporated by reference as Exhibit 2."

13.

From and after the effective date of this Ordinance, former Exhibit 1 that was attached to and adopted by Ordinance No. 2008-11-103 is hereby deleted in its entirety and replaced with a new Exhibit 1 that is attached hereto and incorporated herein by reference for all purposes allowed by law. Such Exhibit 1 is comprised of Resolution No. 2013-06-089 (R), together with the 2012-2013 Land Use Assumptions for Utility Impact Fees that was approved by and incorporated into said Resolution. All references to "Exhibit 1" contained in this Ordinance and Article II of Chapter 130 of the Code of Ordinances, City of McKinney, Texas, are hereby declared to be references to Exhibit 1 of this Ordinance.

14.

From and after the effective date of this Ordinance, former Exhibit 2 that was attached to and adopted by Ordinance No. 2008-11-103 is deleted in its entirety and replaced with a new Exhibit 2 that is attached hereto and incorporated herein by reference for all purposes allowed by law. Such Exhibit 2 is comprised of Resolution

No. 2013-11-187 (R) together with the 2012-2013 Water & Wastewater Impact Fee Update ("Water & Wastewater Improvements Plans") that was approved by and incorporated into said Resolution. All references to "Exhibit 2" contained in this Ordinance and Article II of Chapter 130 of the Code of Ordinances, City of McKinney, Texas, are hereby declared to be references to Exhibit 2 of this Ordinance.

15.

This ordinance shall be and is hereby declared to be cumulative of all other ordinances of the City of McKinney, and this ordinance shall not operate to repeal or affect any of such other ordinances except insofar as the provisions thereof might be inconsistent or in conflict with the provisions of this ordinance, in which event such conflicting provisions, if any, in such other ordinance or ordinances are hereby superseded.

16.

If any section, subsection, sentence, clause or phrase of this ordinance is for any reason held to be unconstitutional, such holding shall not affect the validity of the remaining portions of this ordinance.

17.

All of the regulations provided in this ordinance are hereby declared to be governmental and for the health, safety and welfare of the general public. Any member of the City Council or any City official or employee charged with the enforcement of this ordinance, acting for the City of McKinney in the discharge of his duties, shall not thereby render himself personally liable; and he is hereby relieved from all personal liability for any damage that might accrue to persons or property as a result of any act required or permitted in the discharge of his said duties.

18.

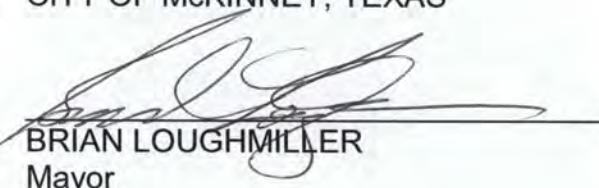

Any violation of this ordinance can be enjoined by a suit filed in the name of the City of McKinney in a court of competent jurisdiction, and this remedy shall be in addition to any penal provision in this ordinance or in the Code of the City of McKinney.

19.

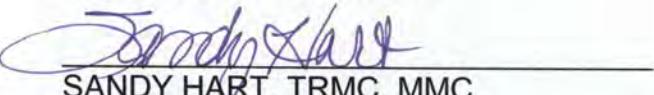

The caption of this Ordinance shall be published one time in a newspaper having general circulation in the City of McKinney, and this Ordinance shall become effective upon publication.

**PASSED AND APPROVED BY THE CITY COUNCIL OF THE CITY OF MCKINNEY,  
TEXAS, ON THIS THE 19TH DAY OF NOVEMBER, 2013.**

CITY OF MCKINNEY, TEXAS

  
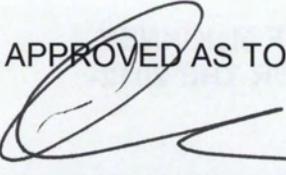

BRIAN LOUGHMILLER  
Mayor

CORRECTLY ENROLLED:

  
SANDY HART, TRMC, MMC  
City Secretary  
BLANCA I. GARCIA  
Assistant City Secretary

DATE: November 19, 2013

APPROVED AS TO FORM:

  
MARK S. HOUSER  
City Attorney

**RESOLUTION NO. 2013-06-089 (R)**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF McKINNEY,  
TEXAS, APPROVING THE LAND USE ASSUMPTIONS FOR THE 2012-  
2013 UTILITY IMPACT FEE UPDATE**

**WHEREAS**, per Texas Local Government Code Section 395.052, a city imposing an impact fee shall update the Land Use Assumptions and capital improvements plan at least every five years; and

**WHEREAS**, the Land Use Assumptions were presented to the Planning and Zoning Commission, serving in their role as the Capital Improvements Advisory Committee, on April 23, 2013 and the meeting minutes were forwarded to the City Council on May 7, 2013; and

**WHEREAS**, per Texas Local Government Code Section 395.054, the City of McKinney, Texas has held a public hearing to consider updated Land Use Assumptions for the 2012-2013 Utility Impact Fee Update; and

**WHEREAS**, per Texas Local Government Code Section 395.054, the City of McKinney, Texas is required to adopt an ordinance, order, or resolution approving the Land Use Assumptions.

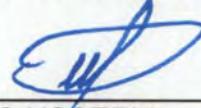

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF McKINNEY, TEXAS, THAT:**

Section 1. The City Council of the City of McKinney, Texas approves the Land Use Assumptions for the 2012-2013 Utility Impact Fee Update.

Section 2. This Resolution shall take effect immediately from and after the date of passage and is so resolved.

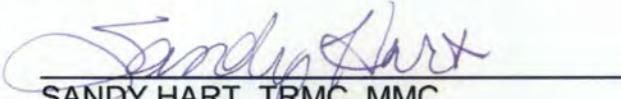

**DULY PASSED AND APPROVED BY THE CITY COUNCIL OF THE CITY OF McKINNEY, TEXAS ON THE 18<sup>TH</sup> DAY OF JUNE, 2013.**

**CITY OF MCKINNEY  
LAND USE ASSUMPTIONS REPORT  
2012-2013 IMPACT FEE UPDATE**

## **INTRODUCTION**

To accurately determine the costs associated with providing infrastructure to serve new development for the purpose of assessing impact fees, a planning study must first be conducted to determine the type, amount, and location of expected growth over the next 10 years. That study, known as a Land Use Assumptions (LUA) report, is described in Chapter 395 of the Texas Local Government Code as the basis for which all capital improvement plans for impact fees are to be created. It must be updated every five years and/or as conditions for development change in the city.

## **CONTENTS**

The report is divided into six sections that serve to satisfy the methodology requirements of State Law. They are:

- I. **Study Process:** A description of the data types and basic procedures used in the study.
- II. **Service Area Maps:** The impact fee service areas for roadway facilities and utility facilities based on the data collection zones.
- III. **Baseline Data:** Information on population, land use, and square footage of non-residential uses for McKinney, as of 2012, for each service area.
- IV. **Ultimate Projections:** Projections for population and square footage of non-residential uses which reflect a completely developed condition based on the city's Future Land Use Plan and current land use patterns.
- V. **10-Year Growth Assumptions:** Population and non-residential growth assumptions for the next ten years by service area.
- VI. **Summary Tables:** Tabular summary of figures for baseline and 10-year projections by service area.

## I. STUDY PROCESS

In order to estimate current population, estimate non-residential square footage levels in McKinney and to develop growth assumptions to be used in capital improvements planning, a wide variety of data have been reviewed. By assimilating data of varying types and noting both the differences and similarities of their variables, logical conclusions have been drawn to support the inclusion of data which is the "most appropriate" for McKinney and its expected growth patterns. It is important to note that there is no "one right way" to carrying out a land use assumptions study, but City Staff has been very diligent to utilize generally accepted forecasting techniques based on sound planning principles.

### A. Data Types:

1. Existing land uses (source: Collin Central Appraisal District).
2. Existing zoning map and regulations (source: City of McKinney).
3. Future land uses based on the adopted Future Land Use Plan and Module Diagram (source: City of McKinney).
4. Historical population information (source: City of McKinney).
5. Residential and non-residential developments constructed over the last seven years (source: City of McKinney).
6. McKinney Town Center Study Phase 2, Market Feasibility Analysis (source: City of McKinney).
7. Proposals for residential and non-residential developments that have been submitted to the City (and in some cases, have been approved) but not yet constructed (source: City of McKinney).

### B. Study Procedures:

Using the data described above, the study has been prepared following these primary steps.

1. Update impact fee service area boundaries in accordance with State Law requirements. See Section II: Service Area Maps.
2. Collect/determine baseline data for 2012 population and non-residential square footage (by land use category and by service area). See Section III: Base Year Data.
3. Project the ultimate population and non-residential square footage (by land use category and by service area) for McKinney at build-out. See Section IV: Ultimate Projections.

4. Project population and non-residential square footage growth for the next ten years (by land use category and by service area). See Section V: 10-Year Growth Assumptions.

## **II. SERVICE AREA MAPS**

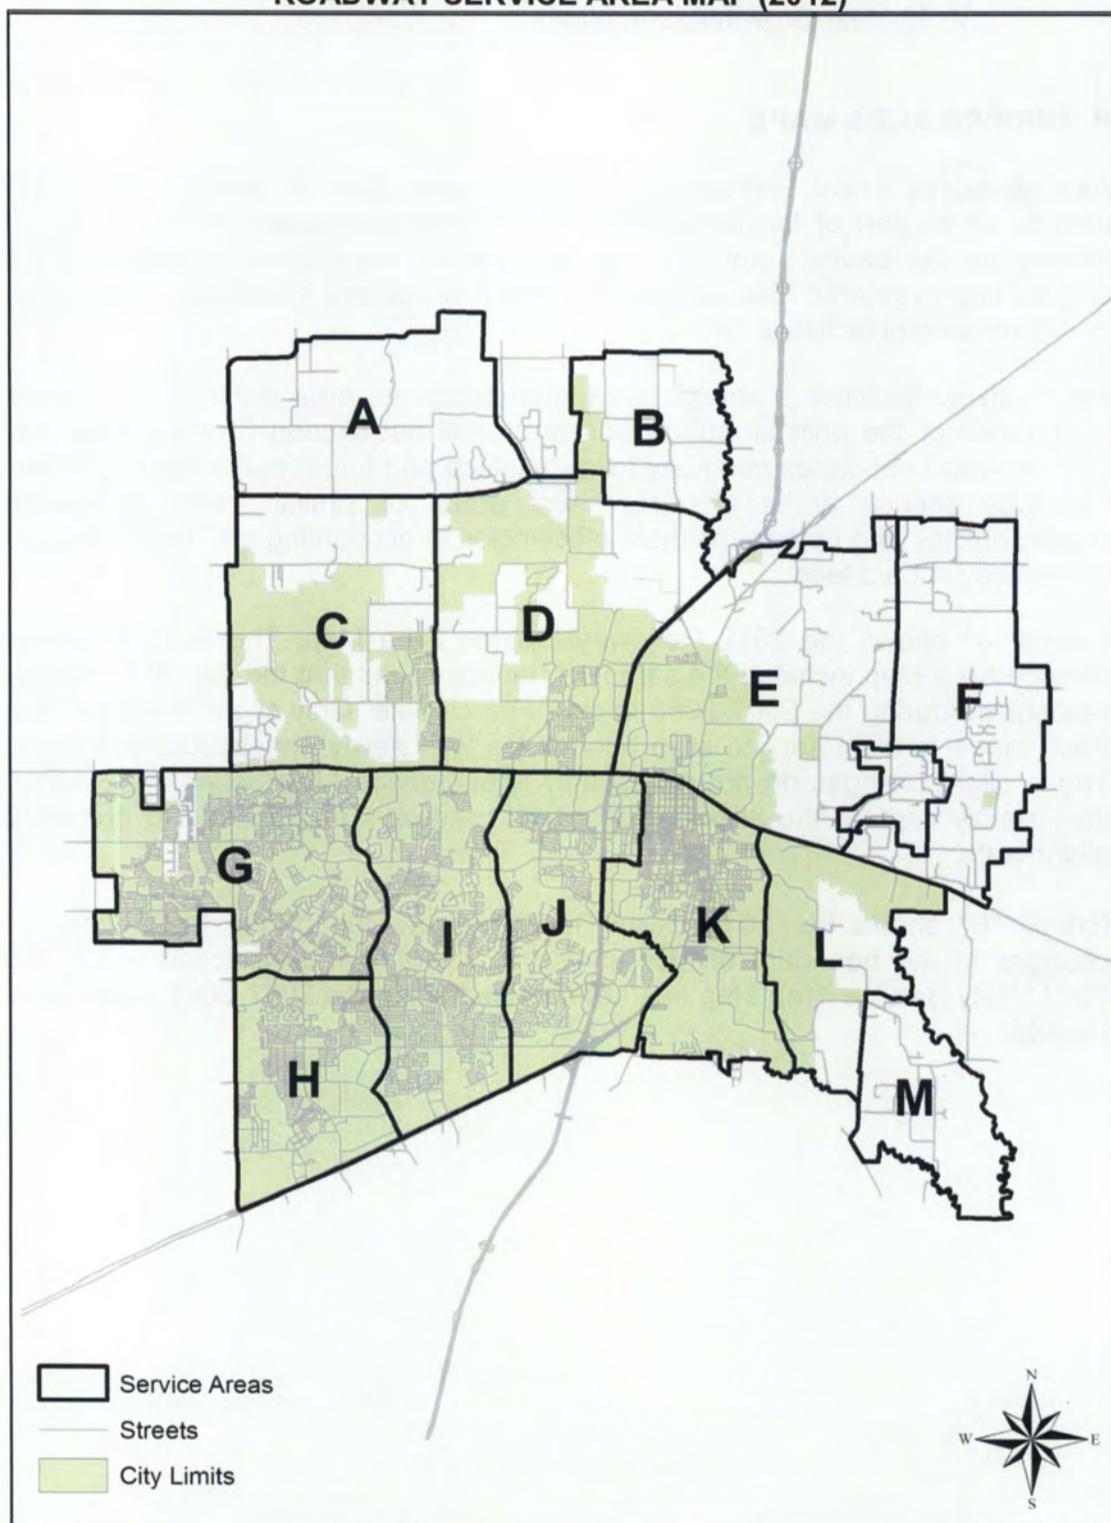

As defined by Local Government Code Chapter 395, a “service area” may include all or part of the land within the political subdivision or its ETJ to be served by the capital improvements or facilities expansions specified in the Capital Improvements Plan, except roadway facilities and storm water, drainage, and flood control facilities.

For roadway facilities, a service area is limited to an area within the corporate boundaries of the political subdivision and shall not exceed 6 miles. Roadway service area boundaries generally follow existing and future major thoroughfares. Roadway service areas also represent areas of similar traffic generation characteristics and help to maintain efficiencies in accounting and administration of roadway impact fees.

Exhibit “A” shows the 2012 Roadway Service Area Map. The 2012 Roadway Service Area Map includes the same 13 Service Areas that the City of McKinney recognized during the 2007-2008 Impact Fee Update. Only slight changes have been made to align service area boundaries with newly constructed roadways. These slight changes do not necessarily alter Service Area boundaries, rather, they simply capture the alignments of built roadways as opposed to proposed alignments.

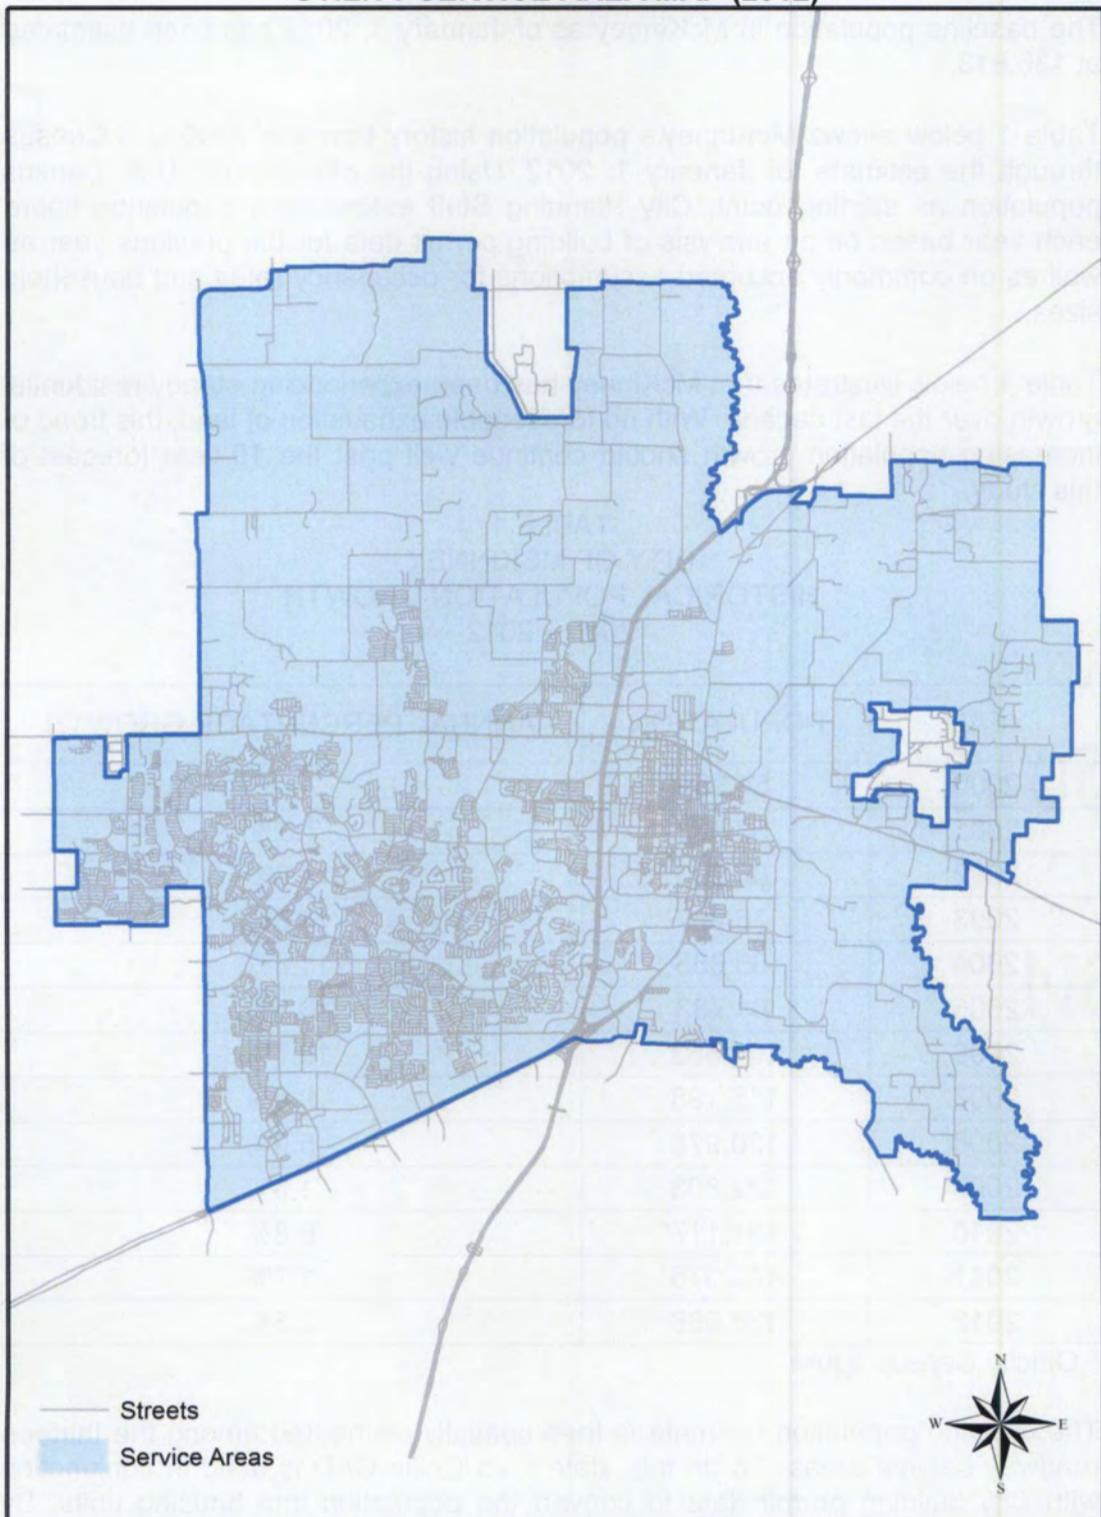

Exhibit “B” shows the 2012 Utility Service Area Map. Since there were no changes in the boundary of McKinney’s Extraterritorial Jurisdiction (ETJ), the 2012 Utility Service Area Map has not changed since the 2007-2008 Impact Fee Update.

**ROADWAY SERVICE AREA MAP (2012)**

**EXHIBIT "A"**

### **UTILITY SERVICE AREA MAP (2012)**

**EXHIBIT "B"**

### **III. BASELINE DATA**

#### **A. Population:**

The baseline population in McKinney as of January 1, 2012 has been estimated at 136,813.

Table 1 below shows McKinney's population history from the 2000 U.S Census through the estimate for January 1, 2012. Using the official 2010 U.S. Census population as starting point, City Planning Staff estimates a population figure each year based on an analysis of building permit data for the previous year as well as on commonly accepted assumptions for occupancy rates and household sizes.

Table 1 below illustrates that McKinney has been experiencing steady residential growth over the last decade. With no foreseeable exhaustion of land, this trend of increasing population growth should continue well past the 10-year forecast of this study.

**TABLE 1  
CITY OF MCKINNEY  
HISTORICAL POPULATION GROWTH  
2000 – 2012**

| YEAR | POPULATION | ANNUAL PERCENTAGE GROWTH |
|------|------------|--------------------------|
| 2000 | 54,369*    | -----                    |
| 2001 | 58,438     | 7.5%                     |
| 2002 | 66,990     | 14.6%                    |
| 2003 | 76,907     | 14.8%                    |
| 2004 | 85,865     | 11.6%                    |
| 2005 | 94,733     | 10.3%                    |
| 2006 | 104,853    | 10.7%                    |
| 2007 | 115,198    | 9.9%                     |
| 2008 | 120,978    | 5.0%                     |
| 2009 | 122,803    | 1.5%                     |
| 2010 | 131,117*   | 6.8%                     |
| 2011 | 133,376    | 1.7%                     |
| 2012 | 136,666    | 2.5%                     |

\* Official Census figure

The citywide population estimate is then spatially distributed among the thirteen roadway service areas. To do this, data from Collin CAD is used in conjunction with City building permit data to convert the population into housing units. By querying the data using Geographic Information Systems (GIS) software, the

number of exiting housing units currently within each service area is estimated. Using the average number of persons in a single family unit and a multi-family unit (i.e. the household size), an estimated number of residents is determined for each service area. For single family, the average household size used is 3.0. For multi-family, the average household size used is 2.4. These are the standard household sizes used by City Planning Staff for the yearly population estimates. (See Summary Table in Section VI)

**B. Non-Residential Square Footages:**

It is also necessary to establish a baseline figure for non-residential uses currently in McKinney. Non-residential uses are estimated in square feet because building square footages provide the basis for determining the projected increase in Service Units demanded over the next ten years.

For roadway impact fees in particular, building square footage is the most common independent variable for the estimation of non-residential vehicle trips generated in the *Institute of Transportation Engineers (ITE) Trip Generation Manual*. This statistic is more appropriate than the number of employees because building square footage is tied more closely to trip generation and is known at the time of application for any development or development modification that would require the assessment of an impact fee.

As a result, the non-residential uses are grouped into three broad categories: Basic, Service, and Retail. These three categories correspond to an aggregation of other specific land use categories based on the North American Industry Classification System (NAICS).

The Basic category generally consists of industrial uses. The Service category generally consists of office uses, including institutional uses (schools, government, and churches). The Retail category generally includes commercial uses.

Baseline square footage of Basic, Service, and Retail uses within the City of McKinney is determined using data from Collin CAD. Collin CAD provides the City Planning Staff with square footage data for all existing non-residential improvements (i.e. structures) within the city limits. GIS is then used to query the data by service area and by non-residential land use type. Using the results of these queries, a summary table of all non-residential uses within each service area is created. Adding the square footage of each non-residential land use within each service area gives the baseline square footages of Basic, Service, and Retail uses. (See Summary Table in Section VI)

## IV. ULTIMATE PROJECTIONS

### A. Population:

An ultimate population projection must also been established. This ultimate projection is needed as an input (i.e. it establishes an upper growth limit when plotting a Gompertz growth curve) for estimating the ten-year projection (which is provided in Section V). Therefore, the Ultimate Project has been calculated first in this report.

The ultimate population of the City of McKinney is a function of residential land use area (acres), housing density (dwelling units per acre), occupancy rate, and household size (persons per dwelling unit). An ultimate population of 357,967 persons is based on the following process:

Within current city limits: An existing land use map is derived from Collin CAD data and reflects currently developed properties in the City of McKinney. The existing land use map reflects existing uses and may not necessarily correspond with the zoning or Future Land Use Plan. By taking the Future Land Use Plan map and subtracting all developed land as shown on the existing land use map, a new map is created that show only undeveloped (vacant) areas within the current city limits. The undeveloped land map is then divided into service areas.

Staff then analyzes the zoning regulations for every undeveloped parcel of land in order to compile a summary of the number of acres available for type of residential development (single-family, multi-family). For parcels currently zoned "Agricultural District," Staff uses the Future Land Use Plan (and its accompanying Module Diagram) to determine future anticipated uses. The Future Land Use Plan (and Module Diagram) is a guide indicating the City's desired future use of land and is already referenced when the City considers zoning requests. The acreage of each type of residential development in each service area is multiplied by the average dwelling units per gross developable acre of type as calculated from existing land use patterns.

$$\left[ \begin{array}{l} \text{Undeveloped} \\ \text{Acres} \end{array} \times \begin{array}{l} \text{Average Dwelling Units per Gross} \\ \text{Developable Acre by Residential Type} \end{array} = \begin{array}{l} \text{Projected} \\ \text{Dwelling Units} \end{array} \right]$$

Within the ETJ but outside current city limits: Property located within the ETJ but outside the city limits is not subject to the City's zoning regulations. Therefore, the Future Land Use Plan (and Module Diagram) is used to consider which zoning regulations would be applied to the property upon annexation into the city. Thus, the ultimate population for the area within the ETJ but outside of the current city limits is calculated based on an analysis of the Future Land Use Plan (and Module Diagram).

The acreage of each land use category in each service area is multiplied by the recommended average allowable housing density given by the Future Land Use Plan (and Module Diagram). The products of each land use category are then added together to obtain the total projected dwelling units in each service area.

$$\left[ \begin{array}{l} \text{Undeveloped} \\ \text{Acres} \end{array} \times \begin{array}{l} \text{Dwelling Units} \\ \text{Per Acre} \end{array} = \begin{array}{l} \text{Projected} \\ \text{Dwelling Units} \end{array} \right]$$

The projected number of dwelling units for each service area within and outside of the city limits are added together to get the total projected increase in the number of dwelling units to build-out.

This figure is converted to population by multiplying it by an average household size (persons per dwelling unit). For single family, the average household size used is 3.0. For multi-family, the average household size used is 2.4. These are the same average household sizes used for the yearly population projection by the City.

The total projected increase in population is added to the 2012 baseline population to determine the ultimate population of the City of McKinney at 100% build out.

$$\left[ \begin{array}{l} \text{Existing} \\ \text{Population} \end{array} + \begin{array}{l} \text{Population} \\ \text{Increase} \end{array} = \begin{array}{l} \text{Population at} \\ \text{Build Out} \end{array} \right]$$

#### B. Non-Residential Square Footage:

To estimate the ultimate square footage of Basic, Service and Retail uses, a method similar to the one used for population is used.

Within the current city limits (applicable for roadway and utility impact fees): A map is created showing only undeveloped (vacant) areas within the current city limits. The undeveloped land map is divided into service areas. Then, Staff analyzes the zoning regulations for every undeveloped parcel of land in order to compile a summary of the number of acres within the current city limits that could be developed for Basic, Service and Retail uses.

For purposes of this analysis, the Basic category consists of zoning districts with designations for:

- ML-Light Manufacturing
- MH-Heavy Manufacturing
- PD-Planned Development Districts with industrial-type base zoning districts or development standards.

The Service category consists of zoning districts designated for:

- O-Office
- O-1 Neighborhood Office
- PD-Planned Development Districts with office-type base zoning districts or development standards).

The Retail category consists of zoning districts designated for:

- BN-Neighborhood Business
- BG-General Business
- C-Planned Center
- PD-Planned Development Districts with commercial-type base zoning districts or development standards.

For properties currently zoned "Agricultural District," Staff uses the Future Land Use Plan (and the accompanying Module Diagram). See below for how Staff groups the various land use types of the Future Land Use Plan (and the Module Diagram) into Retail, Service or Basic categories.

Within the ETJ but outside current city limits (applicable only for utility impact fees): The ultimate non-residential square footage for the area within the ETJ but outside the current city limits is calculated based on an analysis of the Future Land Use Plan (and Module Diagram). This analysis produces a summary of the number of acres within the ETJ but outside current city limits that could be developed for Basic, Service, and Retail uses.

For purposes of this analysis, the Basic category consists of the following future land use types:

- Light Industrial/Manufacturing
- Flex Office/Warehouse
- Airport Operations

The Service category consists of the following future land use types:

- Office-Neighborhood
- Office-Urban
- Office-Regional
- Employment Center
- Community Facilities

The Retail category consists of the following future land use types:

- Retail-Neighborhood
- Retail-Urban
- Retail-Regional
- Lodging
- Entertainment

Using the square footage data from Collin CAD, the square footage of all existing developments (i.e. the square footage of the improvements) are then divided by the total developed acreage to determine the square footage per acre for Basic, Service, and Retail uses. (See Table 2 below)

Using the analysis of the undeveloped acres of Basic, Service, and Retail uses both within and outside of the city limits, the projected increase in square footage in each service area is found by multiplying the acreage of undeveloped land by the square footage per acre. (See Table 3 below)

$$\left[ \begin{array}{l} \text{Existing Square Footage} \\ \text{of Developed Land} \end{array} \times \begin{array}{l} \text{Acres of} \\ \text{Developed Land} \end{array} = \begin{array}{l} \text{Projected Increase in} \\ \text{Building Square Footage} \end{array} \right]$$

The projected increase in non-residential square footage is then added to the 2012 baseline square footage to determine the projected ultimate non-residential square footage of Basic, Service, and Retail uses at build-out. (See Table 4 below as well as the Summary Table in Section VI)

Table 2 below shows the square footage per acre of existing Basic, Service, and Retail uses that are existing in the City of McKinney.

TABLE 2  
CITY OF MCKINNEY  
EXISTING BASIC, SERVICE, AND RETAIL  
SQUARE FOOTAGE PER ACRE

|         | ACRES DEVELOPED | EXISTING BUILDING SQ. FT. | SQ. FT. PER ACRE |
|---------|-----------------|---------------------------|------------------|
| BASIC   | 1,272           | 11,453,254                | 9,004            |
| SERVICE | 1,749           | 9,804,080                 | 5,606            |
| RETAIL  | 1,281           | 9,900,940                 | 7,729            |

Table 3 below shows the projected increase in non-residential square footage of Basic, Service, and Retail uses to build-out.

**TABLE 3**  
**CITY OF MCKINNEY**  
**PROJECTED INCREASE IN BASIC, SERVICE, AND RETAIL**  
**SQUARE FOOTAGE TO BUILD-OUT**

|         | SQ.FT. PER ACRE | ACRES UNDEVELOPED | PROJECTED INCREASE IN BUILDING SQ. FT. |
|---------|-----------------|-------------------|--|
| BASIC   | 9,004           | 5,304             | 47,758,891                             |
| SERVICE | 5,606           | 5,804             | 32,543,118                             |
| RETAIL  | 7,729           | 6,215             | 48,033,018                             |

Table 4 below shows the projected ultimate non-residential square footage of Basic, Service, and Retail uses at build-out.

**TABLE 4**  
**CITY OF MCKINNEY**  
**PROJECTED BASIC, SERVICE, AND RETAIL**  
**SQUARE FOOTAGE AT BUILD-OUT**

|         | EXISTING BUILDING SQ. FT. | PROJECTED INCREASE IN BUILDING SQ. FT. | TOTAL SQ. FT. AT BUILD OUT |
|---------|---------------------------|--|----------------------------|
| BASIC   | 11,453,254                | 47,758,891                             | 59,212,145                 |
| SERVICE | 9,804,080                 | 32,543,118                             | 42,347,198                 |
| RETAIL  | 9,900,940                 | 48,033,019                             | 57,933,959                 |

## V. 10-YEAR GROWTH ASSUMPTIONS

### A. Population:

The ten-year population projection for land use assumptions is not only based on densities established by the existing zoning regulations and by the currently adopted Future Land Use Plan (and Module Diagram), but it is also based on historical population data. As aforementioned in Section III of this report, McKinney has experienced a steady growth over the past 15 years. With no foreseeable exhaustion of land, this trend of increasing population growth is expected to continue well past the 10-year forecast of this study.

There are several methods for projecting population growth based on historic population data. One of these methods involves using a linear growth curve which assumes a constant growth rate and takes the form of a straight line when plotted. This method has suited the City of McKinney's relatively constant growth rate in previous studies.

However, during the period of this update, the City of McKinney (along with the rest of the country) has experienced a significant slowdown in the single family residential market. For projections over a relatively short period of time such as ten years, the linear method is too simplified and cannot accurately accommodate a significant economic slowdown such as what has occurred in recent years. Therefore, in order to develop a projection that is more accurate over the ten year growth horizon, two other standard methods of projection have been utilized. The average of the two methods has been incorporated into the land use assumptions report. These two methods are the Gompertz growth curve and the ratio technique.

The Gompertz growth curve is an extrapolation method that generally fits the growth pattern of McKinney over the last few years. It assumes that, during the total growth period of a geographic area, the growth is slow in the beginning, then increases exponentially for a period of time, and then tapers off as the population approaches an upper growth limit. When plotted, the curve resembles an "S". Using the ultimate population (357,966) from the build-out projections as the upper growth limit, a Gompertz curve has been plotted.

Projections for larger geographic areas (i.e. counties or regions) are more reliable than projections for smaller areas (i.e. cities) since the larger population base is less likely to exhibit short term variations. For this reason, a second method called the ratio technique has also been utilized. This method assumes that, if the relationship between the population of a city and its larger geographic area (for example, a county) has been a generally fixed ratio, the population of the city can be projected based on the population projection of the county.

Analyzing data from Collin CAD over the last five years shows that the total number of single family units in McKinney has been about 15% of the total units in Collin County. Likewise, analyzing data from the State Demographer over the

last five years shows that the population for McKinney has been about 15% of that of Collin County.

With no foreseeable constraint on the supply of developable land in McKinney, it is assumed that McKinney's share of population growth in Collin County will remain the same for at least the next 10 years. Using this assumption, McKinney's population has been calculated for the ten year period as 15% of the population projected by the State Demographer for Collin County for the same 10-year period.

The Gompertz projection provides the low end of the projection and the ratio method provides the high end. Then, the average of both methods is used to establish the 10-year population projection.

Once the population is projected for the 10-year window, dispersing the additional population among the service areas is necessary. In order to accurately disperse the population, population growth trends (i.e. quantity and location of anticipated additional residential dwelling units) have been analyzed by considering all planned lots/units shown on all pending plats and general development plans. (See Summary Table in Section VI)

**Note: Municipal Utility District (Nos. 1 and 2) and Utility Impact Fees**

The Trinity Falls MUD, a large master-planned development located wholly within the northern reaches of McKinney's ETJ, anticipates ultimate build-out of approximately 4,200 single-family residential units on approximately 1,700 acres. The City of McKinney will be providing water and wastewater service to this development, and, as such, this development will be subject to utility impact fees.

Based on consideration of data provided by the developer as well as information contained in various agreements between the developer and the City, City Staff is making the following assumptions for this impact fee update:

- Approximately 2,700 residential units are projected to be developed in the Trinity Falls development within the 10-year planning window of this impact fee update.
- No amount of non-residential square footage is projected to be developed in the Trinity Falls development within the 10-year planning window of this impact fee update.
- The Trinity Falls development is not anticipated to be annexed into the corporate boundaries of the City of McKinney within the 10-year planning window of this impact fee update.

**B. Non-Residential Square Footage:**

The baseline 2012 non-residential square footage figures have been used as a reference point of how developed the service areas are in 2012. To forecast the amount of growth in Basic, Service, and Retail use categories over the 10-year period of the study, a combination of three methods has been used.

It is assumed that the anticipated growth of uses in the Retail category will tend to follow the growth of population. In order to determine the amount of Retail growth within the City of McKinney, a ratio of current square feet of Retail space to population is determined. The location of the anticipated Retail growth is determined by analyzing population growth, the location of undeveloped land and the location of developing retail corridors and nodes. Using these methodologies, Staff is able to forecast the amount and location of Retail uses anticipated over the next 10 years.

It is assumed that the anticipated growth of uses in the Basic category will not follow population but, instead, grow at the same rate it has over the last five years. It is also assumed that Basic uses will be concentrated in industrial areas of the city. A per year average of the amount of Basic uses constructed over the past five years is used by Staff to forecast the amount of Basic growth anticipated over the next 10 years. The location of the anticipated Basic growth is determined by analyzing the location of undeveloped land, zoning regulations and the Future Land Use Plan (and Module Diagram).

To forecast the amount of anticipated growth of uses in the Service category over the next 10 years, a combination of current square footage per person and historical levels of Service uses in McKinney is used. The amount of Service growth can be tied to population growth, but it is not as dependent on the population growth as Retail uses. It is assumed that the location of some Service uses (i.e. neighborhood-scale offices, churches, and schools) would be dispersed according to population, but the location of some other types of Service uses (i.e. larger-scale office parks, governmental centers, etc.) may be located within clusters throughout the city. The location of the anticipated Service growth is determined by analyzing the location of undeveloped land, zoning regulations, and the Future Land Use Plan (and Module Diagram) as well as the location of residential growth. (See Summary Table in Section VI)

## VI. SUMMARY TABLES

Table 5.

| Service Area | Residential |                | Non-Residential Square Feet |           |           |
|--------------|-------------|----------------|-----------------------------|-----------|-----------|
|              | Population  | Dwelling Units | Basic                       | Service   | Retail    |
| A            | 0           | 0              | 0                           | 0         | 0         |
| B            | 0           | 0              | 0                           | 0         | 0         |
| C            | 3,501       | 1,245          | 10,233                      | 108,704   | 488,070   |
| D            | 9,584       | 2,776          | 66,490                      | 1,775,143 | 719,239   |
| E            | 2,550       | 635            | 3,159,347                   | 759,829   | 984,216   |
| F            | 0           | 0              | 0                           | 0         | 0         |
| G            | 35,028      | 12,584         | 138,680                     | 1,201,866 | 883,757   |
| H            | 13,294      | 5,222          | 293,832                     | 803,818   | 1,218,376 |
| I            | 33,327      | 11,881         | 101,530                     | 1,259,562 | 872,364   |
| J            | 21,291      | 8,816          | 1,453,785                   | 2,040,859 | 3,000,259 |
| K            | 18,223      | 6,584          | 5,628,221                   | 1,852,784 | 1,723,306 |
| L            | 15          | 13             | 601,136                     | 1,515     | 11,353    |
| M            | 0           | 0              | 0                           | 0         | 0         |
| Total        | 136,813     | 49,756         | 11,453,254                  | 9,804,080 | 9,900,940 |

Table 6.

| Service Area | Residential |                | Non-Residential Square Feet |           |           |
|--------------|-------------|----------------|-----------------------------|-----------|-----------|
|              | Population  | Dwelling Units | Basic                       | Service   | Retail    |
| A            | 0           | 0              | 0                           | 0         | 0         |

**CITY OF MCKINNEY  
2012 – 2022 WATER & WASTEWATER IMPACT FEE UPDATE**

**SECTION I – INTRODUCTION**

**A. GENERAL**

In accordance with the requirements of Chapter 395.052 of the Local Government Code, this report establishes the City of McKinney's Capital Improvement Plan for water and wastewater impact fees and calculates the maximum allowable fee for each. Land use assumptions for impact fees were generated under a separate document by the City of McKinney's Planning Department.

Chapter 395, of the Local Government Code is an act that provides guidelines for financing capital improvements required by new development in municipalities, counties, and certain other local governments. The basis for determination of an impact fee requires the preparation and adoption of a land use plan and growth assumption, and the preparation of a 10-year capital improvement plan. The capital improvement plan requires an analysis of total capacity, the level of current usage and commitments of capacity of existing capital improvements. From these two phases, a maximum impact fee is calculated.

The Act allows the maximum impact fee to be charged if revenues from future ad valorem taxes, and water and sewer bills are included as a credit in the analysis. If not, the Act allows the maximum fee to be set at 50% of the calculated maximum fee. The following items were included in the impact fee calculation:

1. The portion of the cost of the new infrastructure that is to be paid by the City, including engineering, property acquisition and construction cost.
2. Existing excess capacity in lines and facilities that will serve future growth and which were paid for in whole or part by the City.
3. Engineering and quality control fees for construction projects.
4. Interest and other finance charges on bonds issued by the City to cover its portion of the cost.

The engineering analysis portion of the Water and Wastewater Fee determines utilized capacity cost of the major water distribution and wastewater collection facilities between the year 2012 and the year 2022. Facilities in this analysis include, water pump stations, water storage tanks, water transmission lines and wastewater collection lines. The North Texas Municipal Water District (NTMWD) water treatment, wastewater treatment and distribution components were excluded from this analysis. The study period is a ten-year period with 2012 as the base year. The impact fee calculations for the water and wastewater systems are based on land use assumptions provided by the City of McKinney. Prior to this impact fee update, the City's Water Distribution and Wastewater Collection hydraulic models were updated for 2012, 2022 and buildout conditions. The hydraulic model results are available for review from the City of McKinney. The equivalency factors utilized in this analysis conform to the latest American Water Works Association Standards (C700 - C703).

## B. WATER & WASTEWATER IMPACT FEE GLOSSARY

1. Advisory Committee means the capital improvements advisory committee established by the City for purposes of reviewing and making recommendations to the City Council on adoption of the City's impact fee program.
2. Area-Related Facility means a capital improvement or facility expansion which is designated in the impact fee capital improvements plan and which is not a site-related facility. Area-Related Facility may include capital improvements that are located off-site, or within or on the perimeter of the development site.
3. Assessment means the determination of the amount of the maximum impact fee per service unit that can be imposed on new development.
4. Capital Improvement means either a water facility or a wastewater facility with a life expectancy of three or more years, to be owned and operated by or on behalf of the City.
5. City means the City of McKinney, Texas.
6. Credit means the amount of the reduction of an impact fee due, determined under this ordinance or pursuant to administrative guidelines that is equal to the value of area-related

facilities provided by a property owner pursuant to the City's subdivision or zoning regulations or requirements, for the same type of facility.

7. Debt Service means the 20-year financing costs of projects applied to all eligible existing and proposed water and wastewater facilities.
8. Facility Expansion means either a water facility expansion or a sewer facility expansion.
9. Impact Fee means either a fee for water facilities or a fee for wastewater facilities, imposed on new development by the City pursuant to Chapter 395 of the Texas Local Government Code in order to generate revenue to fund or recoup the costs of capital improvements or facility expansion necessitated by and attributable to such new development. Impact fees do not include the dedication of rights-of-way or easements for such facilities, or the construction of such improvements, imposed pursuant to the City's zoning or subdivision regulations.
10. Impact Fee Capital Improvements Plan means either a water capital improvements plan or a wastewater capital improvement plan adopted or revised pursuant to the impact fee regulations.
11. Land Use Assumptions means the projections of population and growth, and associated changes in land uses, densities and intensities over at least a ten-year period, as adopted by the City and as may be amended from time to time, upon which the capital improvements plans are based.
12. Land Use Equivalency Table means a table converting the demands for capital improvements generated by various land uses to numbers of service units, as may be amended from time to time.
13. New Development means the subdivision of land; the construction, reconstruction, redevelopment, conversion, structural alteration, relocation, or enlargement of any structure; or any use or extension of the use of land; any of which increases the number of service units.

14. Recoulement means the imposition of an impact fee to reimburse the City for capital improvements that the City had previously oversized to serve new development.
15. Service Area means either a water service area or wastewater service area which impact fees for capital improvements or facility expansion will be collected for new development occurring within such area, and within which fees so collected will be expended for those types of improvements or expansions identified in the type of capital improvements plan applicable to the service area.
16. Service Unit means the applicable standard units of measure shown on the land use equivalency table in the Impact Fees Capital Improvements Plan that can be converted to water meter equivalents, for water or for wastewater facilities, which serves as the standardized measure of consumption, use or generation attributable to the new unit of development.
17. Site-Related Facility means an improvement or facility which is for the primary use or benefit of a new development, and/or which is for the primary purpose of safe and adequate provision of water or wastewater facilities to serve the new development, and which is not included in the impact fees capital improvements plan and for which the property owner is solely responsible under subdivision or other applicable development regulations.
18. Utility Connection means installation of a water meter for connecting a new development to the City's water system, or connection to the City's wastewater system.
19. Wastewater Facility means a wastewater interceptor or main, lift station or other facility included within and comprising an integral component of the City's collection system for wastewater. Wastewater facility includes land, easements or structure associated with such facilities. Wastewater facility excludes site-related facilities.

20. Wastewater Facility Expansion means the expansion of the capacity of any existing wastewater improvement for the purpose of serving new development, but does not include the repair, maintenance, modernization, or expansion of an existing sewer facility to serve existing development.
21. Wastewater Capital Improvements Plan means the adopted plan, as may be amended from time to time, which identifies the wastewater facilities or wastewater expansions and their associated costs which are necessitated by and which are attributable to new development, for a period not to exceed 10 years.
22. Water Facility means a water main, pump station, storage tank or other facility included within and comprising an integral component of the City's water storage or distribution system. Water facility includes land, easements or structures associated with such facilities. Water facility excludes site-related facilities.
23. Water Facility Expansion means the expansion of the capacity of any existing water facility for the purpose of serving new development, but does not include the repair, maintenance, modernization, or expansion of an existing water improvement to serve existing development.
24. Water Capital Improvements Plan means the adopted plan, as may be amended from time to time, which identifies the water facilities or water expansions and their associated costs which are necessitated by and which are attributable to new development, for a period not to exceed 10 years.
25. Water Meter means a device for measuring the flow of water to a development, whether for domestic or for irrigation purposes.

**C. LAND USE ASSUMPTIONS (Provided By: City of McKinney Planning Department)**

The impact fee land use assumptions utilized in this update were prepared by the City of McKinney's Planning Department and are presented in a separate document. The land use assumptions projected an ultimate residential population of approximately 357,967 in the City of McKinney's ultimate planning boundary. This is a lower ultimate population than projected in the City's 2007 Water and Wastewater Impact Fee Update, which estimated a residential population of 387,964, a decrease of 29,997 people.

The residential and non-residential growth provided by the City for the year 2012 through 2022 is summarized in Table No. 1.

**TABLE NO. 1**  
**Residential and Non-Residential Growth from 2012 to 2022**

| Year                    | Residential Population* | Non-Residential Uses**      |                     |
|-------------------------|-------------------------|-----------------------------|---------------------|
|                         |                         | Type                        | Developed Area (SF) |
| 2012                    | 136,813                 | Basic                       | 11,453,254          |
|                         |                         | Service                     | 9,804,571           |
|                         |                         | Retail                      | 9,900,940           |
|                         |                         | <b>Total:</b>               | <b>31,158,274</b>   |
| 2022                    | 199,003                 | Basic                       | 12,780,084          |
|                         |                         | Service                     | 14,260,185          |
|                         |                         | Retail                      | 14,401,196          |
|                         |                         | <b>Total:</b>               | <b>41,441,465</b>   |
| <b>Res. Growth Rate</b> | <b>1.45</b>             | <b>Non-Res. Growth Rate</b> | <b>1.3</b>          |

\* Residential Population – Represent Estate, Low Density, Medium Density and High Density Residential Categories

\*\* Basic – Industrial Land Uses

\*\* Service – Office & Institutional Land Uses

\*\* Retail – Commercial Land Uses

As shown in Table No. 1, increases in the residential population and non-residential uses will occur during the 10-year capital recovery period. The water demand and wastewater flows from the residential and non-residential uses dictate the ultimate size of facilities, while the rate of growth is important to determine the timing of system improvements to meet the City's growing needs. The eligible water impact fee facilities are shown on **Exhibit 1**. The eligible wastewater facilities are shown on **Exhibit 2** in this report.

## SECTION II

### WATER & WASTEWATER C.I.P. AND IMPACT FEE ANALYSIS

#### A. DEFINITION OF A SERVICE UNIT – WATER AND WASTEWATER

Chapter 395 of the Local Government Code requires that impact fees be based on a defined service unit. A “service unit” means a standardized measure of consumption, use generation, or discharge attributable to an individual unit of development calculated in accordance with generally accepted engineering or planning standards. This impact fee defines a water and wastewater service unit to be a *¾-inch water meter* and has referred to this service unit as a Single Family Living Unit Equivalent (SFLUE). The SFLUE is based on the continuous duty capacity of a *¾-inch water meter*. This is the typical meter used for a single family detached dwelling, and therefore is considered to be equivalent to one “living unit”. Other meter sizes can be compared to the *¾-inch meter* through a ratio of water flows as published by the American Water Works Association as shown in **Table No. 2** below. This same ratio is then used to determine the proportional water and wastewater impact fee amount for each water meter size.

**TABLE NO. 2**  
Living Unit Equivalencies For Various Types and Sizes of Water Meters

| Meter Type           | Meter Size | Continuous Duty Maximum Rate (gpm) <sup>(a)</sup> | Ratio to ¾" Meter |
|----------------------|------------|---|-------------------|
| Simple               | ¾"         | 15  | 1.0               |
| Simple               | 1"         | 25  | 1.7               |
| Simple               | 1-1/2"     | 50  | 3.3               |
| Simple               | 2"         | 80  | 5.3               |
| Compound             | 2"         | 80  | 5.3               |
| Turbine (Irrigation) | 2"         | 160   | 10.7              |

## B. CALCULATION OF WATER & WASTEWATER - LIVING UNIT EQUIVALENTS

The City of McKinney provided the existing water meter count by size category as of December 2012. In total, there are 47,277 domestic water and irrigation meters serving an existing population of 136,813 residents and business. **Table No. 3** shows the number of existing meters, the living unit equivalent factor and the total number of living unit equivalents for each sized water meter.

The number of wastewater accounts was determined by subtracting the number of irrigation meters from the number of domestic water meters. This equates to 45,481 wastewater accounts. **Table No. 4** illustrates the existing wastewater accounts and the SFLUE's.

The residential growth rate of 1.45 in **Table 1** was applied to  $\frac{3}{4}$ -inch through 2-inch meters. The non-residential growth rate of 1.3 in **Table 1** was applied to 3-inch through 8-inch meters. Utilizing these growth rates in a straight-line extrapolation of the existing water and wastewater accounts, the numbers of new accounts was calculated for the year 2022. City records indicate the historical growth of  $\frac{3}{4}$ -inch and 1-inch meters is approximately 45%  $\frac{3}{4}$ -inch meters and 55% 1-inch meters for the base meter sizes. These percentages were applied to the total growth of  $\frac{3}{4}$ -inch and 1-inch meters. Living unit equivalents were then applied to the water meters and wastewater accounts for 2012 and 2022, resulting in a total number of living units. The difference in the total number of 2012 and 2022 living units results in the new living unit equivalents during the impact fee period. The calculation of living unit equivalents is summarized in **Table 3** and **Table 4**.

**TABLE NO. 3**  
**Water Living Unit Equivalents 2012 - 2022**

| Meter Size    | 2012                         |  |                                       | 2022                      |  |                                       | New<br>Living Unit<br>Equivalents<br>During<br>Impact<br>Fee Period |

### C. COST OF FACILITIES

Unit cost for proposed water and wastewater lines larger than 12 inches in diameter that are anticipated to be constructed by private development, include the City's oversize cost participation only. These water and wastewater lines are highlighted green on **Exhibits 1 through 2**. Oversize cost participation from City is when funds become available. For City participation, the developer must bid the 12-inch as a base and the oversize as an additive alternate. City initiated water and waste water lines include the full cost of the proposed facility. These water and wastewater lines are highlighted red on **Exhibits 1 through 2**. Developer initiated water and wastewater line projects which are 12 inches or less in diameter are not included in this Impact Fee analysis, as the cost for these size lines are the responsibility of the developer. These water and wastewater lines are highlighted blue on **Exhibits 1 through 2**.

Actual construction costs of the various elements of the water and wastewater systems were utilized where the information was known. The existing cost of facilities was determined from Contractor's final pay requests, City purchase orders, bid tabulation forms and developer's agreements.

Most of the cost data for existing water and wastewater lines included in the impact fee analysis have been located. A 5% debt service, over a period of 20-years, has been added to all projects. Actual costs were used for those existing projects where records were available.

#### D. WATER DISTRIBUTION SYSTEM

Computer models for the years 2012, 2022 and Buildout were prepared and analyzed by Birkhoff, Hendricks & Carter. The models were developed and water demand distributed from residential population and non-residential land use projections provided by the City of McKinney's Planning Department. The projected developed land areas from the City's Land Use Assumptions follow closely to the construction of major facilities in the system. These facilities include pump stations, storage tanks, and major distribution lines. All computer models were run for the Maximum Hourly Demands in a three-day extended period simulation to insure proper sizing of the facilities to meet peak demands.

##### 1. Existing Pump Stations, Ground Storage Reservoirs & Elevated Storage Tanks

The existing water distribution system included in the impact fee analysis (As of December 2012) includes the facilities summarized in **Table No. 5** and **Table No. 6**.

**TABLE NO. 5**  
**Water Distribution System -- Existing Pump Stations & Ground Storage**

| Pump Station   | Number of Pumps | Rated Capacity (MGD) | Number of Ground Storage Tanks | Total Ground Storage Available (Gallons) |
|----------------|-----------------|----------------------|--------------------------------|--|
| McKinney Ranch | 11              | 49.7                 | 2                              | 16,000,000                               |
| University     | 6               | 50.0                 | 2                              | 16,000,000                               |
| <b>Total:</b>  | <b>17</b>       | <b>99.7</b>          | <b>4</b>                       | <b>32,000,000</b>                        |

**TABLE NO. 6**  
**Existing Elevated Storage Tanks**

| Elevated Storage Tanks             | Capacity in Million Gallons |
|------------------------------------|-----------------------------|
| Industrial Elevated Storage Tank   | 2.0                         |
| U.S. 380 Elevated Storage Tank     | 1.5                         |
| Wilmett Elevated Storage Tank      | 2.0                         |
| Virginia Elevated Storage Tank     | 1.5                         |
| Independence Elevated Storage Tank | 3.0                         |
| Community Elevated Storage Tank    | 3.0                         |
| <b>Total</b>                       | <b>13.0</b>                 |

The existing McKinney Ranch Low Side pumps and the Chestnut Elevated Storage Tank are no longer utilized and were not included in the impact fee calculation. The existing Gerrish Pump Station is near capacity and is not included in the impact fee calculation.

The pump stations and ground storage facilities were analyzed with the maximum daily demand, while elevated storage acts dynamically and therefore was analyzed utilizing the difference between the Maximum Hourly Demand and the Maximum Daily Demand.

## 2. Distribution Lines

The distribution lines consist of all lines within the Service Area planning boundary supplying water to customers in the City of McKinney. Existing and proposed distribution lines vary in size from 3/4-inch services to 72-inch transmission lines. The cost of water lines includes construction cost, appurtenances (water valves, fire hydrants, taps and the like), utility relocations, purchase of easements and engineering costs. Financing cost over a 20-year term is included for each project.

Unit cost for proposed capital improvement water lines 12-inches and larger in diameter classified as City initiated, or City participation in oversize water lines, include the City's full cost of the proposed facility. Developer's initiated water line projects, 12 inches or less in diameter were not included in this Impact Fee analysis, as the cost for these size lines are the responsibility of the developer.

### **3. Water Supply**

The City of McKinney currently receives all of its water supply from the North Texas Municipal Water District (NTMWD). McKinney's allocation of the capital cost of services as a Member of the NTMWD was specifically excluded from the impact fee analysis.

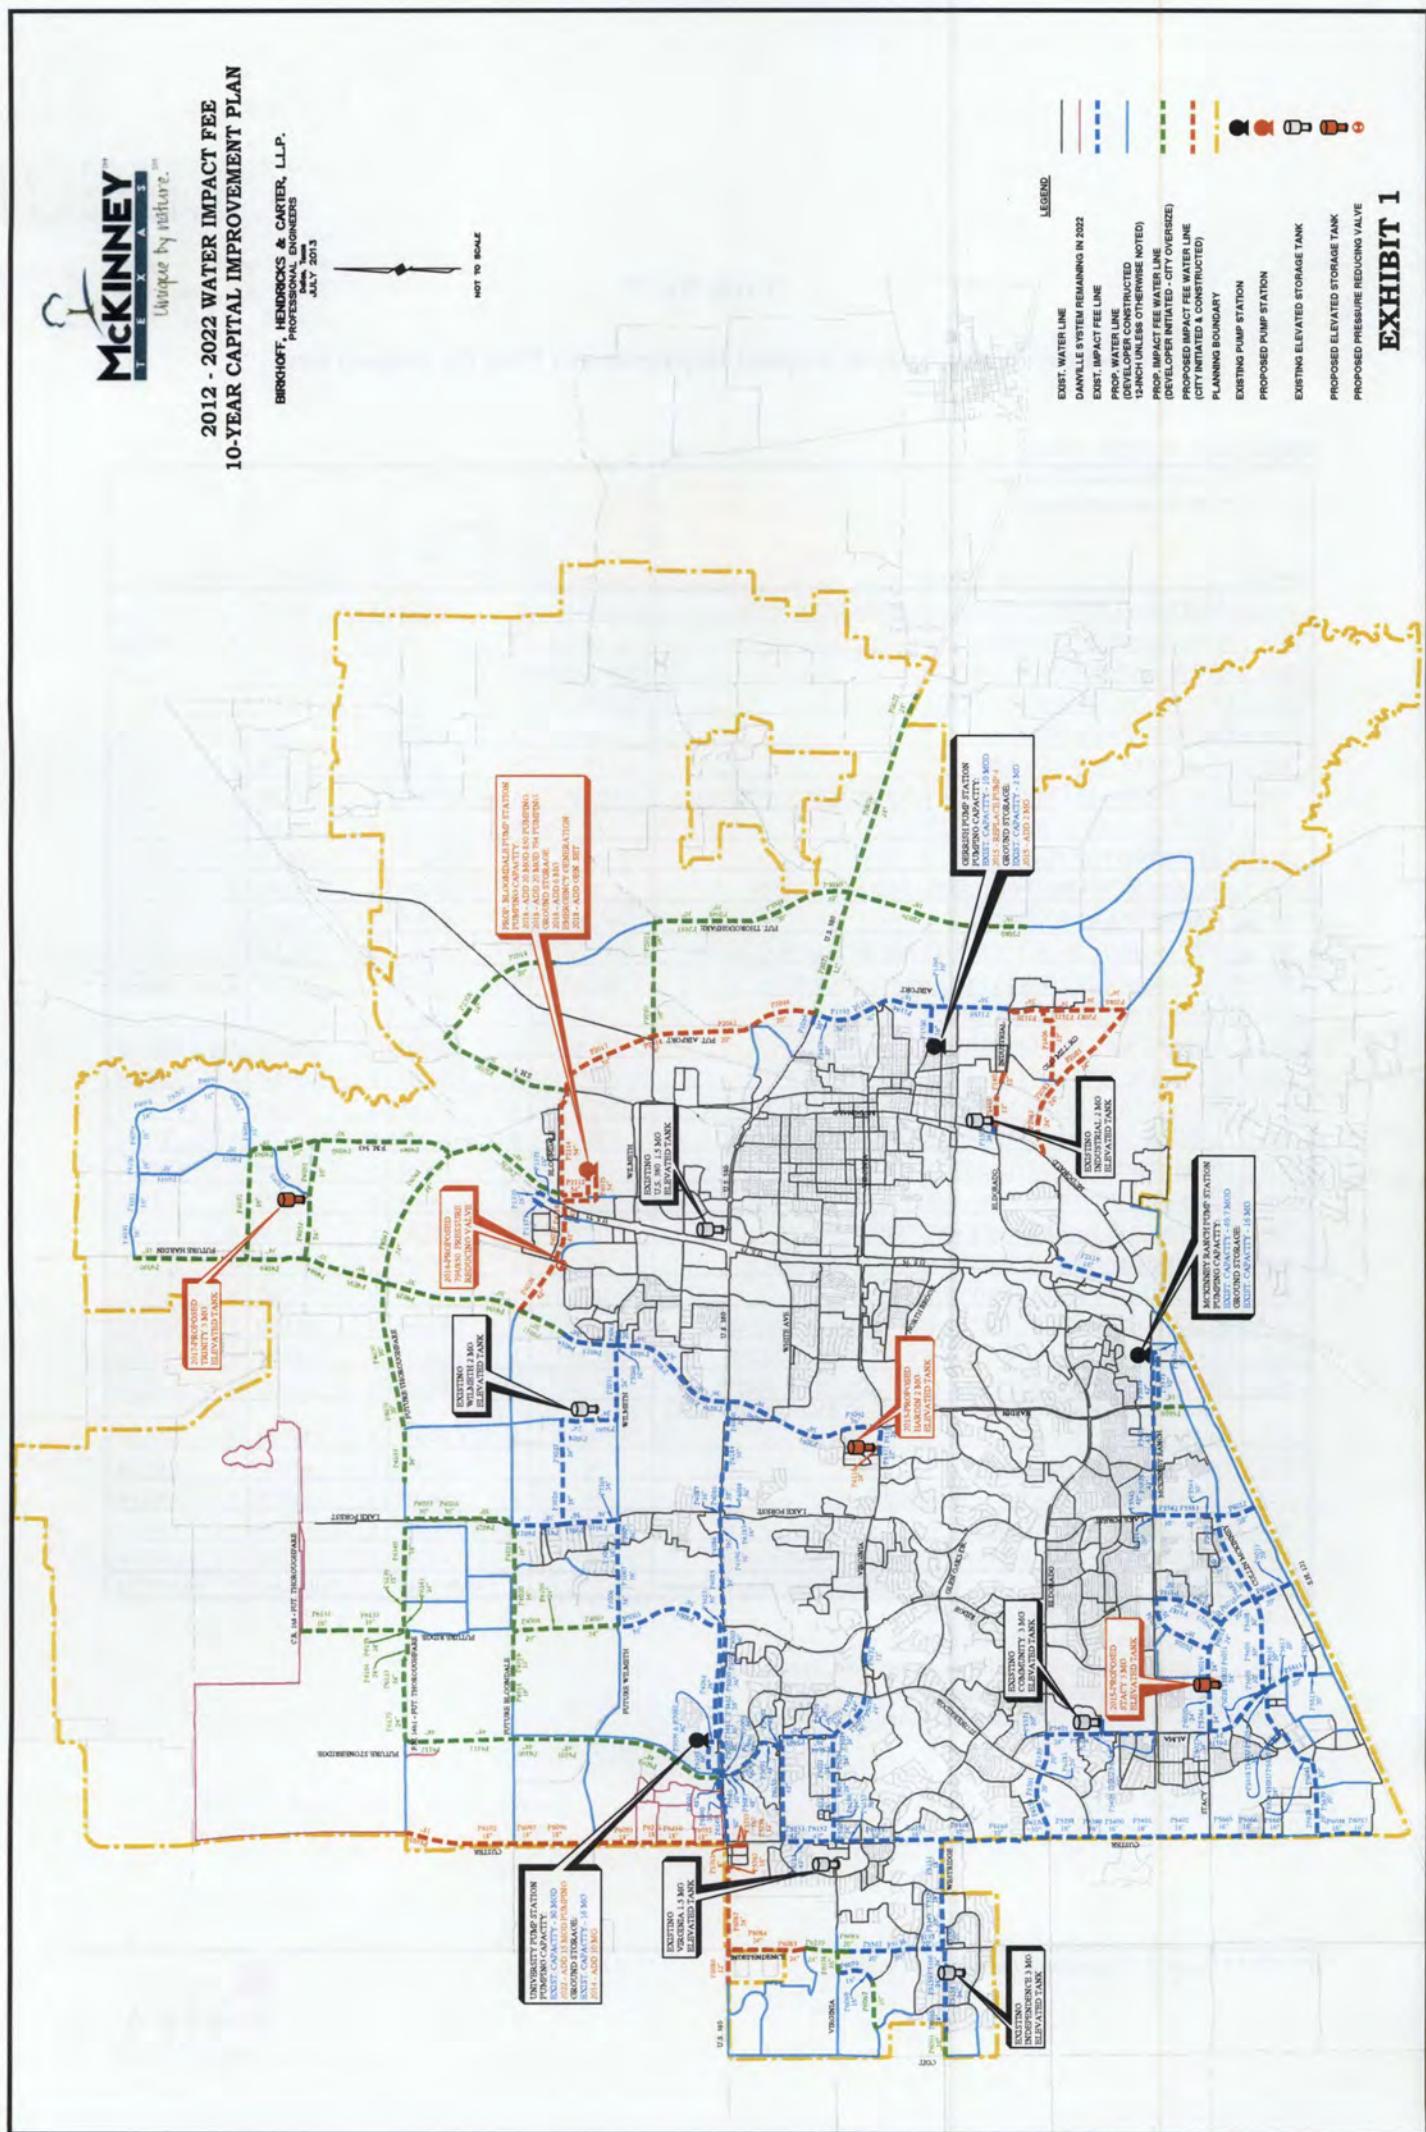

If included, McKinney's share of the NTMWD capital cost could include the original construction cost, expansion cost and financing cost of the following components:

- a) Water Rights Cost in Lake Lavon and other Sources
- b) Raw Water Intake Structures
- c) Raw Water Pump Stations
- d) Treatment Plant and Expansion
- e) High Service Pump Stations
- f) Transmission Lines
- g) NTMWD Owned Ground Storage Facilities

### **4. Water Distribution System Capital Improvement Projects for Impact Fees**

In order to meet the demands of the anticipated growth over the next 10-years, as provided in the Land Use Assumptions prepared by the City of McKinney, certain water distribution system improvements are required. **Exhibit 1** shows the recommended water system improvements and **Table No. 7** itemizes each project and the project cost in 2012 dollars. These recommended improvements form the basis for the water system impact fee calculation.

*The capital improvement plan for impact fees provides for system improvements within the defined Service Area Planning Boundary.*

## EXHIBIT 2

**Table No. 7**  
**10-Year Water System Capital Improvement Plan for Impact Fees**

**PROPOSED WATER LINES**

| Year | Project   | Size               | Opinion of Construction Cost (A) | Debt Service (B)     | Total Project Cost   |

## **5. Utilized Capacity**

Utilized capacity for the water distribution system was calculated based on the water line size required for each model year (2012, 2022 and build out). Analysis of the water distribution system is based on the maximum daily demand, maximum hourly demand, and the minimum hourly demand. Pump station capacity is generally based on the maximum daily system demand while transmission and distribution facilities are sized based on either the maximum hourly demand or the minimum hourly demand, whichever demand is greater for a particular water line. Often times, the capacity of a water line is determined by the flows generated by the minimum hourly demand. The minimum hourly flows are usually higher in those lines that are used to refill elevated storage. For each line segment in the water distribution model, the buildup flow rate in the line was compared to the flow rate in the same line segment for the 2012 and the 2022 models.

The percent utilized capacity was then calculated for each year based on the buildout capacity. The utilized capacity during the Impact Fee period is the difference between the year 2022 capacity and the year 2012 capacity. **Table No. 8** below summarizes the project cost and utilized cost over the impact fee period of 2012 - 2022 for each element of the Water Distribution System. The utilized capacity for each water distribution facility, both existing and proposed, is presented in detail in Impact Fee Capacity Calculation **Table Nos. 9, 10, 11, 12 and 13.**

**Table No. 8**  
**Summary of Eligible Water Distribution Project Cost and Utilized Capacity Cost**

| <b>Water System Facility</b>             | <b>20-Year Project Cost</b> | <b>Utilized Capacity (\$) in the CRP Period</b> |
|--|-----------------------------|---|

## **E. WASTEWATER COLLECTION SYSTEM**

Computer models for the years 2012, 2022 and Buildout were prepared by Birkhoff, Hendricks & Carter. The models were developed and peak flows calculated from the residential population and non-residential land use projections provided by the City of McKinney's Planning Department. Computer models were run to determine peak wet weather flow to insure proper sizing of the collection system.

### **1. Collection Lines**

The natural creeks, whose basins will collect wastewater through the installed system of collection lines that flow into the geographic area serviced by the NTMWD.

The wastewater collection system analysis covered all of the drainage basins within the Service Area planning boundary. Each collection system was analyzed for line sizes 12-inches in diameter and larger. Eliminating line sizes smaller than 12-inches in diameter from the study leaves only the interceptor and trunk lines included in the study. The wastewater project cost includes necessary appurtenances (manholes, lift stations, aerial crossings and the like), purchase of easements, utility relocation, pavement removal and replacement, and engineering costs. For existing Impact Fee projects, actual costs were utilized where known. Future project cost estimates were based on 2012 average unit cost per linear foot and includes engineering, easements, and construction cost.

All eligible wastewater collection line projects in the Service Area planning boundary were included in the impact fee analysis. Eligible existing and proposed wastewater facilities are shown on **Exhibit 2**.

### **2. Treatment**

The North Texas Municipal Water District (NTMWD) provides the City of McKinney with a significant portion of its wastewater collection, and transportation. NTMWD also owns and operates the Wilson Creek Treatment Plant and provides all of McKinney's wastewater treatment. McKinney pays NTMWD for the cost of this service according to the City's present contribution of wastewater flows in each of the regional facilities in any given year.

This Impact Fee study excludes the cost of NTMWD regional collection and transportation and facilities located within the City's Service Area planning boundary that were paid for by NTMWD. Existing treatment plant and future treatment plant expansion costs of NTMWD were specifically excluded from this Impact Fee analysis.

### **3. Wastewater System Capital Improvement Projects for Impact Fees**

The 10-year Wastewater System Capital Improvement Plan for Impact Fees was developed by Birkhoff, Hendricks & Carter, LLP. **Exhibit 2** shows the recommended system improvements and **Table No. 14** itemizes each project and the project cost. These recommended improvements form the basis for the Wastewater System Impact Fee Calculation.

*The capital improvement plan for impact fees provides for system improvements within the defined Service Area Planning Boundary.*

#### **4. Utilized Capacity**

Utilized capacity for the wastewater collection system was calculated based on land use assumptions provided by the City of McKinney. The population and non-residential growth in each wastewater drainage basin was determined utilizing the City's growth projections. These growth rates were utilized to calculate 2012, 2022 and buildout peak design flows.

The percent-utilized capacity was calculated for the design flow of each study year based on the buildout capacity. The utilized capacity during the Impact Fee period is the difference between the year 2012 capacity and the year 2022 capacity. **Table No. 15** below summarizes the project cost and utilized cost over the impact fee period of 2012 – 2022. The utilized capacity for each eligible existing and proposed wastewater collection line is presented in detail in the Impact Fee Capacity Calculation **Table Nos. 16 and 17**. **Table No. 18** summarizes the utilized capacity of lift stations eligible for impact fee recovery.

**TABLE NO. 15**  
**Summary of Eligible Capital Cost and Utilized Capacity Cost**

| <b>Wastewater System Facility</b>   | <b>20-Year Project Cost</b> | <b>Utilized Capacity (\$ in the CRP Period)</b> |
|-------------------------------------|-----------------------------|---|
| Existing Wastewater Collection Line | \$20,302,674                | \$2,133,385                                     |
| Proposed Wastewater Collection Line | \$17,433,758                | \$7,097,312                                     |
| Proposed Wastewater Facilities      | \$1,106,802                 | \$606,116                                       |

(1) Estimated Cost Based on Actual Bid Price

## **F. CALCULATION OF MAXIMUM IMPACT FEES - WATER & WASTEWATER**

The **Water System** impact fee for a  $\frac{3}{4}$ " meter is calculated as follows:

$$\begin{aligned} \text{Maximum Impact Fee} &= \frac{\text{Eligible Existing Facility Cost} + \text{Eligible Proposed Facility Cost}}{\text{Number of New Living Unit Equivalent over the Next 10-Years}} \\ &= \frac{\$30,599,144 + \$65,017,105}{33,711} = \frac{\$95,616,249}{33,711} \end{aligned}$$

Calculated Water Maximum Impact Fee = \$2,836.33 \*

\* Maximum Allowable Water Impact Fee is 50% of the Calculated Water Maximum Impact Fee

$$\text{Maximum Assessable Water Impact Fee} = \$2,836.33 \times 50\% = \$1,418.17$$

The **Wastewater System** impact fee is calculated as follows:

$$\begin{aligned} \text{Maximum Impact Fee} &= \frac{\text{Eligible Existing Facility Cost} + \text{Eligible Proposed Facility Cost}}{\text{Number of New Living Unit Equivalent over the Next 10-Years}} \\ &= \frac{\$2,133,385 + \$8,049,363}{29,256} = \frac{\$10,182,748}{29,256} \end{aligned}$$

Calculated Water Maximum Impact Fee = \$348.05 \*

\* Maximum Allowable Water Impact Fee is 50% of the Calculated Water Maximum Impact Fee

$$\text{Maximum Assessable Wastewater Impact Fee} = \$348.05 \times 50\% = \$174.03$$

Chapter 395, of the Local Government Code allows the maximum impact fee to be charged if revenues from Future Ad Valorem Taxes, and water and sewer bills are included as a credit in the analysis. If not, the Act allows the maximum assessable fee to be set at 50% of the calculated maximum fee. The maximum impact fees for the water and wastewater systems are calculated separately by dividing the cost of the capital improvements or facility expansions necessitated and attributable to new development in the Service Area within the ten year period by the number of living units anticipated to be added to City within the ten year period. To simplify collection, we recommend the fee remain fixed throughout the 5-year period, unless changed by Council.

**Table No. 19** summarizes the per service unit equivalent maximum assessable impact fee that can be charged based on the calculated 50% credit above.

**TABLE NO. 19**  
**Maximum Assessable Water & Wastewater Impact Fee**

**Maximum Assessable Water Impact Fee per Living Unit Equivalent:** **\$1,418.17**

**Maximum Assessable Wastewater Impact Fee per Living Unit Equivalent:** **\$174.03**

| Typical Land Use                       | Meter Type | Meter Size | Living Unit Equivalent | Max. Assessable Impact |              | Total        |
|--|------------|------------|------------------------|------------------------|--------------|--------------|

Maximum Assessable Fee (post-credit) is 50% of the Maximum Fee (pre-credit).

## SCHEDULE 2

Actual water and wastewater impact fees charged based on date of final plat recordation.

**TABLE A.**

Actual water and wastewater impact fees charged if date of final plat recordation is prior to September 1, 2003 for which no replatting is necessary.

| Meter Size<br>(inches) | WATER         | WASTEWATER   |
|------------------------|---------------|--------------|
| 3/4                    | \$ 1,418.17   | \$ 174.03    |
| 1                      | \$ 2,363.61   | \$ 290.04    |
| 1 1/2                  | \$ 4,727.22   | \$ 580.09    |
| 2                      | \$ 7,563.55   | \$ 928.14    |
| 3                      | \$ 15,127.10  | \$ 1,856.28  |
| 4                      | \$ 23,636.09  | \$ 2,900.44  |
| 6                      | \$ 47,272.18  | \$ 5,800.88  |
| 8                      | \$ 75,635.48  | \$ 9,281.40  |
| 10                     | \$ 330,905.24 | \$ 40,606.13 |

**TABLE B.**

Actual water and wastewater impact fees charged if date of final plat recordation is between September 1, 2003 and November 9, 2008 for which no replatting is necessary.

| Meter Size<br>(inches) | WATER         | WASTEWATER   |
|------------------------|---------------|--------------|
| 3/4                    | \$ 1,418.17   | \$ 174.03    |
| 1                      | \$ 2,363.61   | \$ 290.04    |
| 1 1/2                  | \$ 4,727.22   | \$ 580.09    |
| 2                      | \$ 7,563.55   | \$ 928.14    |
| 3                      | \$ 15,127.10  | \$ 1,856.28  |
| 4                      | \$ 23,636.09  | \$ 2,900.44  |
| 6                      | \$ 47,272.18  | \$ 5,800.88  |
| 8                      | \$ 75,635.48  | \$ 9,281.40  |
| 10                     | \$ 330,905.24 | \$ 40,606.13 |

**TABLE C.**

Actual water and wastewater impact fees charged if date of final plat recordation is between November 9, 2008 and November 19, 2013 for which no replatting is necessary.

| Meter Size<br>(inches) | Meter Type | WATER         | WASTEWATER   |
|------------------------|------------|---------------|--------------|
